Salesforce Projects:

BloodTrix, MechIT Technologies Ltd.

The objective of the system is to provide support and services to the customers and dealers who want blood with maintaining the detailed information along with the location at which blood packages are to be dispatched. This application also manages same functionality with hospitals, where hospital store manager sends lead request to BloodTrix where decision will be taken to convert it into opportunity.

Insurance Management, MechIT technologies Ltd

This project is basically designed for Singapore based one of the insurance company agents for managing whole sales cycle for the same. Where they can manage all their client database along with all details including their Leads, convertible Leads, upcoming targets, reminders for all their day to day meetings, and about their clients like clients birthday, anniversary which is useful for them to maintain relationship between clients and agent. Agents can also assign tasks to their juniors and take follow up from them.
